# 1. Application Range

This specification applies to the control of 61" Wide Plasma Display Panel (Hereafter, referred to as PDP) with DTE terminal (Personal computer, etc., and hereafter, referred to as PC). Refer to User's Manual for the details of the function.

# 2. Communication Specification

The control of PDP with PC uses the RS-232C interface.

PC sends each control command to PDP, and PDP can execute the function described in the function list.

Basically, procedure structure is 'Handshake in which it starts with @G and terminates with @Q'. As a rule, the time-sharing by which the answering from PDP is monitored is used.

## - Communication parameter

Baud rate	4800 BPS
Data length	8 bits
Parity	None
Stop bit	1 bit
Flow control	RTS/ CTS
Communication code	ASCII code
Reception time out	4 seconds
	When status is not returned after sending the command, wait for the time out 4 seconds and send the command again.

# 3. Connection with PC

When using the DOS/V compatible machine, connect with it by the straight D-SUB 9 pins cable.

## 4. Communication Procedure

The handshake system is used for the communication between PC and PDP, and the status is returned against the command sending.

Moreover, PC sends the communication start command and the communication termination command at the start and termination of the communication.

The key of the remote control and the main unit becomes a disabling condition (does not function) because the communication has the priority when the communication starts after the @Q communication mode terminates.

### 4-1. Control format

The command and the reception status consist of ASCII code, and this specification describes it by the character string.

#### 4-1-1. Communication start command

The communication starts.

@	G	Cr
---	---	----

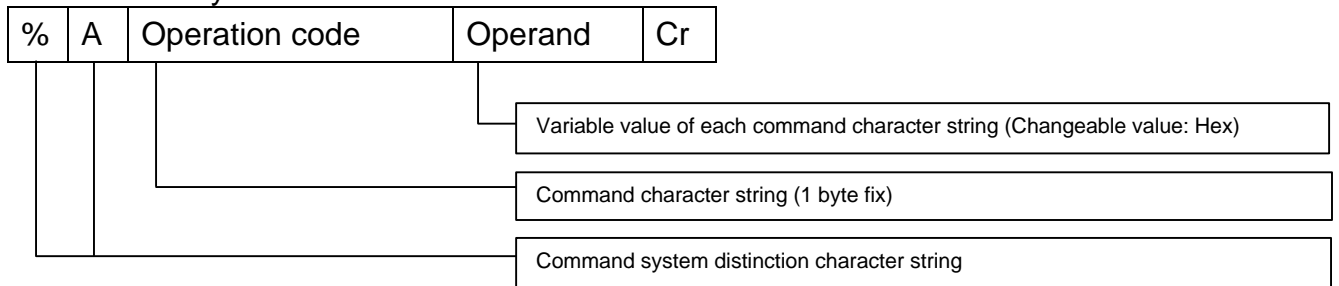

When this command is sent a text communication mode start, and the communication command described in 'Function list' in clause 5 can be accepted. Wait for the normal reception status after sending this command.

However, resend it even if reception status is not received for 4 seconds.

Resend it until returning the normal reception status because irregular data or 'irregular data + reception status' might return after sending the start command. Cr means Carriage Return.

#### 4-1-2. Communication command

Command system

### 4-1-3. Status

Normal termination

@	S	Cr
---	---	----

PDP returns the status to PC after PDP normally execute the command sent by PC.

Normal termination with condition data

@	S	DT	Cr
---	---	----	----

PDP sends the operating condition to PC after PC sends the condition reading command.

(Refer to 'Function list' in clause 5 for details of a reading command and above-mentioned DT value character string.)

Abnormal termination

@	E	ST	Cr
---	---	----	----

PDP sends it to PC if PDP does not normally execute the command sent by PC.

Above-mentioned ST value character string:

01: Communication error (For example, the cable is not correctly connected.)

02: Setting error (For example, the command is not correctly sent.)

03: Function execute error (For example, PDP fails in the execute of the command.)

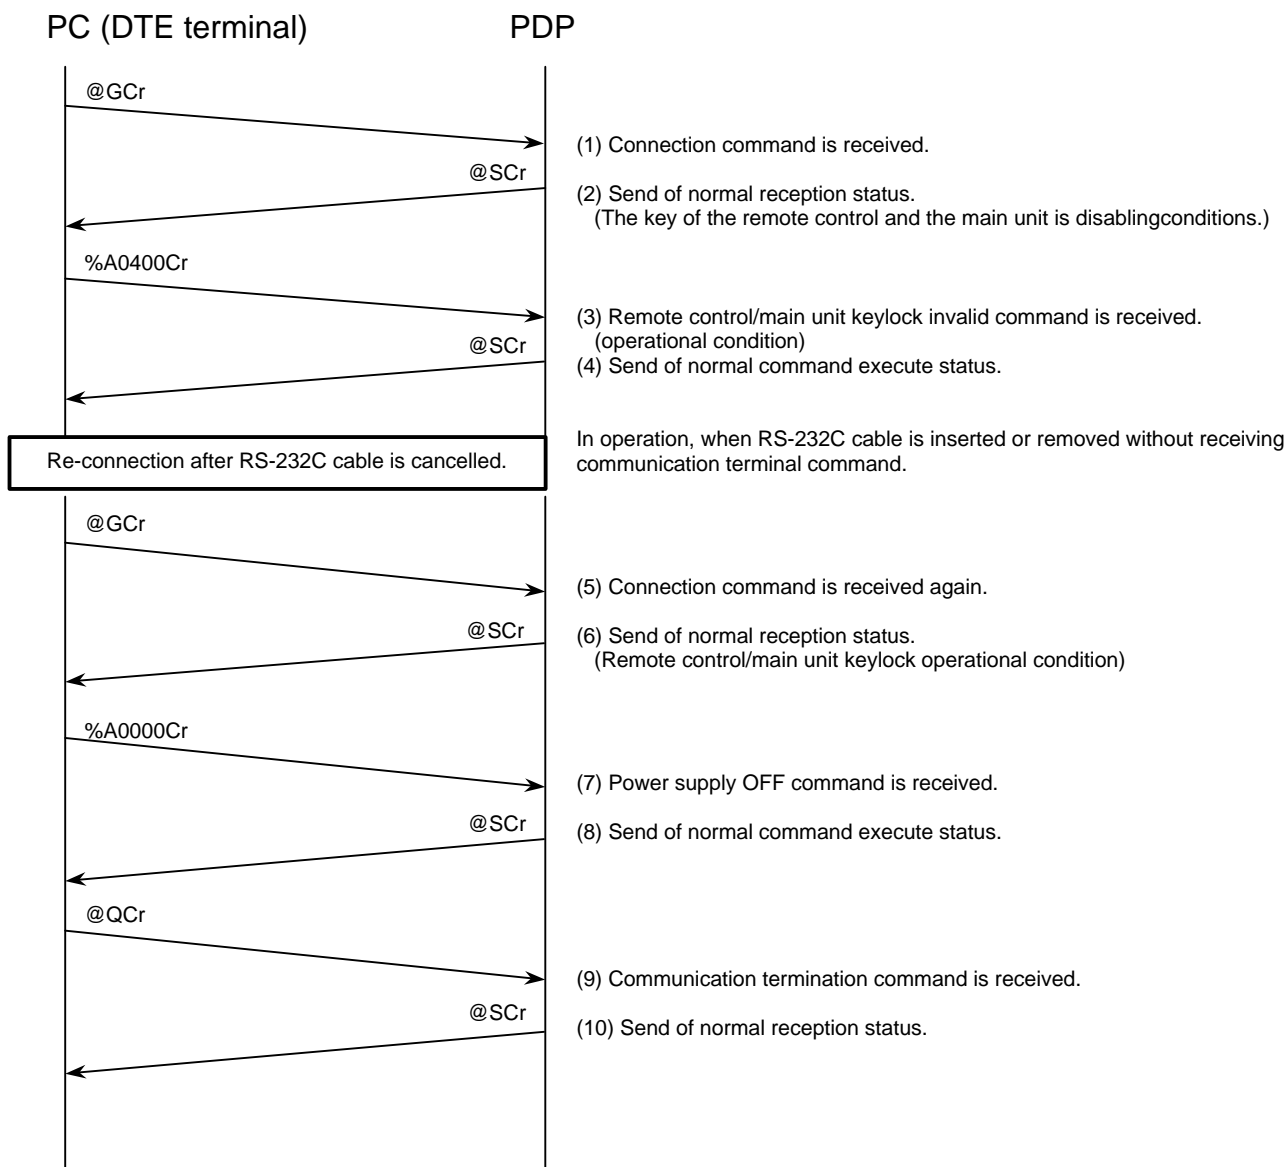

### 4-1-4. Communication termination command

The communication mode terminates.

@	Q	Cr
---	---	----

## 4-2. Protocol procedure example

The protocol procedure example is as follows.

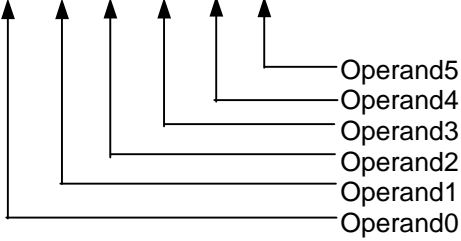

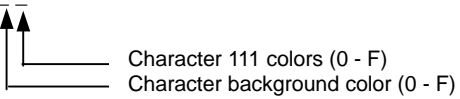

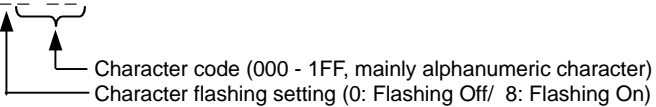

Communication code(hexadecimal) of protocol procedure example.

@GCr	=40 47 0D
@SCr	=40 53 0D
%A0400Cr	=25 41 30 34 30 30 0D
%A0000Cr	=25 41 30 30 30 30 0D
@QCr	=40 51 0D

## 5. Function List

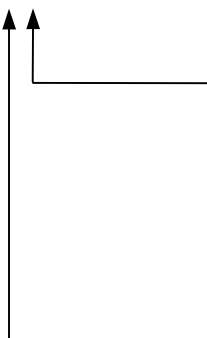

'Cr' is added at the end of all communication commands. Moreover, variable value means the hex. And only the command of "Power supply On/Off setting" and "Power supply condition reading" is controllable by the power supply standby state.

A power supply standby state shows the state of "Power supply condition Off: @S00"

Function		Communication command	Note
01	Power supply On/ Off setting	Power supply Off: %A0000 Power supply On: %A0001	
	Power supply condition reading	%A0080 [Return Code] Power supply condition Off: @S00 Power supply condition On: @S01	
02	On screen automatic display On/ Off setting	%A0100: Automatic display Off %A0101: Automatic display On	OSD display setting
	On screen automatic display On/Off set condition reading	%A0180 [Return Code] @S00: Automatic display condition Off @S01: Automatic display condition On	
03	On screen character clear	%A02	
04	On screen character display (A specified character is superimposed on the screen)	%A03  <p><b>(Operand0)</b> The coordinate of horizontal character Setting range: 00 - 1D</p> <p><b>(Operand1)</b> The coordinate of vertical character Setting range: 00 - 0F</p> <p><b>(Operand2)</b> Character background color/ Character color Setting range:</p>  <p><b>(Operand3)</b> The number of characters Setting range: 01 - 0F (15 characters or less)</p> <p><b>(Operand4) (Operand5)</b> Character code Setting range:</p>  <p><b>(Operand4) and (Operand5) are added according to the number of characters of (Operand3).</b> Example) The flashing display of "A" in red color on the black background at coordinate (0.0) is %A03000004018041. Note) - Pay attention to the screen burn-in by the fixed display for a long time. - The display of this function is cleared by the OSD display with the key of remote control and the main unit (including communication control).</p>	<p>Refer to supplement 6-1 for details of the coordinate.</p> <p>Refer to supplement 6-2 for details of the color number.</p> <p>Refer to CHART. for details of the character-code.</p>

Function		Communication command	Note
05	Setting of remote control/main unit keylock function	Remote control keylock is invalid and main unit keylock is invalid. : %A0400 Remote control keylock is invalid and main unit keylock is valid: %A0401 Remote control keylock is valid and main unit keylock is invalid: %A0402 Remote control keylock is valid and main unit keylock is valid: %A0403	Note) When the communication is started again after the termination of the communication, the remote control key and the main unit key become a disabling condition (does not function) for the priority of the communication.
	Confirmation of remote control/main unit keylock setting	%A0480 [Return Code] @S00: Remote control keylock invalid Main unit keylock invalid @S01: Remote control keylock invalid Main unit keylock valid @S02: Remote control keylock valid Main unit keylock invalid @S03: Remote control keylock valid Main unit keylock valid

## 6. Supplement

### 6-1. Details of display coordinate of on screen character

[Size of character]

[Range of display and number of characters]

< Installation setting: Normal >

Origin of coordinates of range of display:  
Upper left of the range of display of left figure  
(Installation condition: 177 mm in horizontal and 116 mm in vertical from upper left of screen)  
The number of character in horizontal direction: 30 characters  
(Simultaneous display is 16 characters.)  
The number of character in vertical direction: 16 characters

< Installation setting : +90 Deg. \_The remote control receiver is put at the upper position. >

Origin of coordinates of range of display:  
Upper left of the range of display of left figure  
(Installation condition: 116 mm in horizontal and 174 mm in vertical from upper left of screen)  
The number of character in horizontal direction: 16 characters  
The number of character in vertical direction: 16 characters

< Installation setting : -90 Deg. \_The remote control receiver is put at the lower position. >

Origin of coordinates of range of display:  
Upper left of the range of display of left figure  
(Installation condition: 118 mm in horizontal and 176 mm in vertical from upper left of screen)  
The number of character in horizontal direction: 16 characters  
The number of character in vertical direction: 16 characters

Note) A physical position of origin of coordinates (0. 0) changes by the rotation setting of INSTALLATION as shown in the above.

The position of the origin of coordinates of display range is just a guide.  
(Showing actual value from the panel display starting position.)

6-2. Details of display color number of on screen character

Color number	Color of screen	Color number	Color of screen
0	Black	8	----
1	Blue	9	Light Blue
2	Green	A	Light Green
3	Cyan	B	Light Cyan
4	Red	C	Light Red
5	Magenta	D	Light Magenta
6	Brown	E	Yellow
7	White	F	White(high intensity)
